

Approval of a 5-year plan by the Management Board and the Supervisory Board

November 27, 2018

MOBOTIX's Management Board and Supervisory Board have approved the corporate strategy including a corporate planning statement for the next five years. This plan envisages a minimum revenue target of EUR 100 million by fiscal year 2022/23 and an EBIT margin of around 12% in fiscal year 2022/23. This corresponds to an annual average revenue growth rate of around 9.3% and a dividend proposal of around EUR 0.64 per share for the 2022/23 financial year.

The growth drivers of the 5-year plan are a new high-performance camera platform with corresponding analytical and cloud-based software applications, the expansion of the complementary product line Mx MOVE and order developments in the hardware and software area.

The achievement of these targets is also to be accelerated by possible acquisitions.

Key points of the 5-year plan will be presented at the German Equity Forum on 28 November 2018 in Frankfurt, where the company will be represented for the first time this year. In addition to a company presentation on the current developments in sales and development, focal points of the 5-year plan will be presented. The Management Board will answer investors' questions in 1on1 meetings. Edison Research has created a Quickview before the start of the Equity Forum.

The new designated sponsor and research partner equinet Bank AG has also published the initiation study about the company today. Further roadshows are planned for February and March 2019 as well as the

participation in the Solventis Share Forum in April 2019 and in the Spring Conference of the Equity Forum in May 2019.
